Reichard & Escalera Update

Puerto Rico Energy Bureau Launches Digital Platform for Registration of Tranche 2 Renewable Energy Projects

On January 13, 2022, the Puerto Rico Energy Bureau (the “Bureau”) announced the launching of a platform for the registration of parties interested in “Tranche 2” renewable energy projects. Such registration process seeks to include additional 500MW in generation and 250MW in storage to the Puerto Rico grid.

According to the Bureau, individuals and entities interested in participating in the acquisition of goods and services of “Tranche 2” will be able to access and register on the website created by the Bureau for such purposes, which can be accessed by [clicking here](#). Furthermore, the Bureau’s website will serve as a platform for releasing bid-related publications (including applicable laws and regulations for compliance), obtaining project-related requirements, gather information from proponents, request comments, and other actions necessary for completing the selection and contracting process.

As access to registration of interested parties commenced January 13, 2022, it is expected that the Bureau will release additional information and guidance upon the announcement of new renewable energy projects.
